FW248 RF720 HURRICANE LADIES WATERPROOF SAFETY BOOT BOA LACES

DESCRIPTION

• The RF720 Hurricane Safety Boot delivers exceptional protection without sacrificing comfort. Engineered for a Women's Fit. Developed through collaboration with industry experts, this shoe boasts a refined anatomical design specifically tailored to women's feet. Unlike traditional safety footwear, which can be bulky and designed around a men's last, this shoe utilises a slimmer last shape. This translates to a closer fit in the heel and ankle area, minimising excess volume and ensuring superior comfort and support throughout the workday. Its fibreglass toecap shields your toes from a minimum of 200 joules of impact, offering peace of mind on any worksite, while the waterproof construction keeps your feet cool and dry in the most treacherous conditions. The exclusively crafted penetration resistant protective midsole developed by Activ-Step®, adds an extra layer of defence against sharp objects you might encounter throughout your workday. The heavy-duty outsole provides superior traction in challenging terrains, whether you're navigating gravel, mud, or ballast. Our FORCE10® Scuff cap provides ultimate protection and durability to the toe area, even in the most testing conditions. For this style, we have incorporated The BOA® Fit system which delivers a micro-adjustable precision fit, engineered to perform in the toughest conditions, making it easier and quicker to take off, even when wearing gloves. We use leather from a tannery audited & certified by the Leather Working Group (LWG). Don't let long days slow you down!
